

**Department of Electrical Engineering**

Activity: "Innovative Teaching Learning Pedagogy"

|                                                                                                                                                                                                                                                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Date &amp; Day:</b> Thursday, 22/08/2024                                                                                                                                                                                                                                                             |
| <b>Activity Name:</b> Open Book Test (OBT)                                                                                                                                                                                                                                                              |
| <b>Subject :</b> AMES                                                                                                                                                                                                                                                                                   |
| <b>Venue:</b> Class Room                                                                                                                                                                                                                                                                                |
| <b>Activity conducted by:</b> Ms. Rajashree Bhokare                                                                                                                                                                                                                                                     |
| <b>Objectives:</b> <ol style="list-style-type: none"><li>1. Encourage students to focus on understanding core concepts rather than rote memorization.</li><li>2. Help students feel less pressure compared to closed-book exams, promoting a deeper and more thoughtful approach to learning.</li></ol> |
| <b>Photographs:</b><br>                                                                                                                                                                                             |
| <b>Outcome:</b> <ol style="list-style-type: none"><li>1. Students demonstrated a deeper understanding of core concepts rather than relying on memorization.</li><li>2. Students showed initiative in exploring beyond classroom notes, demonstrating self-directed learning habits.</li></ol>           |

**Department of Electrical Engineering****Mapping of Pedagogy with POs and PSOs :**

| PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PS01 | PS02 | PS03 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|------|
| 1   | 1   | 1   | 1   | 1   | 1   |     |     |     |      | 1    |      | 1    | 1    |      |

**Mapping of POs and PSOs with Justification:**

| POs and PSOs Mapped | Justification                                                                                                                                                                |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| P01                 | OBT questions tested students' ability to apply core embedded system and microcontroller knowledge (e.g., timers, interrupts, instruction sets) to solve technical problems. |
| P02                 | OBT encouraged students to interpret circuit diagrams or program snippets, identify logical faults, and propose suitable microcontroller-based solutions.                    |
| P03                 | Students were given design-based or application-based programming questions (e.g., generating PWM or serial communication) requiring creative embedded solutions.            |
| P04                 | Analytical questions in the OBT prompted learners to explore datasheets, specifications, or simulation tools to justify their answers or optimize designs.                   |
| P05                 | OBT indirectly evaluated students' familiarity with development environments (e.g., MPLAB, Proteus), and referencing manuals for C programming on microcontrollers           |
| P06                 | Case-based OBT questions focused on real-time embedded applications (e.g., medical devices, smart meters) to explore responsible design.                                     |
| P011                | Questions involving embedded system integration, modular programming, or resource optimization assessed students' ability to manage engineering tasks and trade-offs.        |
| PS01                | Students applied knowledge of PIC18F458, timers, interrupts, and interfacing in solving case-based or coding problems.                                                       |
| PS02                | Though simulation wasn't directly performed, OBT required solutions suitable for simulation/implementation.                                                                  |
